

## **TABLE OF CONTENTS**

Forward.....	x
1 Scope and General.....	1
1.1 Scope .....	1
1.2 Applications.....	1
1.3 Blade Pile Group Capability .....	1
1.4 Technical Report Outline.....	2
1.5 Notations .....	3
2 General Design Requirements.....	5
2.1 Design Standards & Documentations .....	5
2.2 Design Life .....	5
2.3 Other International Design Requirements.....	5
3 Blade Pile Group Products Summary .....	6
3.1 Blade Pile .....	6
3.1.1 Introduction.....	6
3.1.2 Blade Piles.....	6
3.1.3 Multiple Blades .....	8
3.2 Blade Pile Cap.....	9
3.3 Bracing Pile .....	10
3.4 Blade Pile Accessories.....	12
3.5 Blade Pile Cap Slab System .....	13
3.6 AirFormer Air Slab System – Patent Pending .....	14
4 The Edge over Competitors .....	16
4.1 Blade Pile Vs Alternative Piles .....	16
4.2 Blade Pile Cap Vs Alternative Support Methods.....	19
4.3 Bored Pier Replacement .....	22
4.4 Blade Fins Vs Spiral Pile .....	22
4.5 Environmental Considerations .....	24
5 Site Investigation.....	25
5.1 Site Classification .....	25
5.2 Regional Soil Suction .....	26
5.3 Blade Pile Depth & Testing Information .....	28
5.3.1 Testing Requirements.....	28
5.3.2 Piles in Reactive Clay .....	28

- 5.3.3 Pile Design for Trees .....32
- 6 Structural Design Considerations .....33
  - 6.1 Structural Analysis & Member Capacities .....33
  - 6.2 Shaft Section Capacities .....33
  - 6.3 Connections .....34
- 7 Design for Durability.....35
  - 7.1 Introduction.....35
  - 7.2 Pile Protection Method .....37
  - 7.3 Minimum pile specifications.....37
- 8 Construction Applications .....42
  - 8.1 Bored Pier Replacement .....42
  - 8.2 Post Replacement.....42
  - 8.3 Piling for Adjacent Services.....43
  - 8.4 Retaining Wall .....44
- 9 Pile Installation.....45
  - 9.1 Equipment & Torque .....45
  - 9.2 Pre Drilling.....46
  - 9.3 Safety .....46
- 10 Blade Pile Testing .....47
  - 10.1 Compression .....47
  - 10.2 Uplift .....49
  - 10.3 Lateral .....50
  - 10.4 Compression or Tension Pile Testing Template Sheet.....51
  - 10.5 Lateral Pile Testing Template Sheet .....52
- 11 References.....53
- Appendix A. Design Guide to Blade Pile Manual & Load Tables .....57
  - A1 Load Summary.....59
  - A2 Internal Slab Design Loads.....60
  - A3 Exterior or Interior Beam - Single Storey up to H2 Class.....60
  - A4 Exterior Beam - Double Storey up to H2 Class.....62
  - A5 Interior Beam - Double Storey up to H2 Class.....66
  - A6 Raised Single Storey on Piles.....67
- Appendix B. Slab Design Examples .....68
  - B1 Blade Pile Cap Slab System – Waffle Example.....68

B2	Blade Pile Cap Slab System – Conventional Example .....	70
B3	Blade Pile Slab System Example.....	72
Appendix C. Geotechnical Design Calculation .....		74
C1	Geotechnical Calculation Plan.....	74
C2	Geotechnical Values & Reduction Factor.....	85
C3	Design Calculation Examples.....	92
C4	Alternative Methods to Determine the Ultimate Geotechnical Strength .....	95
Appendix D. Blade Pile Capacity tables .....		96
D1	Design Ultimate Geotechnical Strength $R_{d,ug}$ for different Reduction factors $\phi_g$ .....	97
D2	Design Ultimate Geotechnical Strength $R_{d,ug}$ for different Reduction factors $\phi_g$ .....	98
D3	Design Ultimate Geotechnical Strength $R_{d,ug}$ for different Reduction factors $\phi_g$ .....	99
D4	Design Ultimate Geotechnical Strength $R_{d,ug}$ for different Reduction factors $\phi_g$ .....	100
D5	Ultimate Geotechnical Capacities in Homogeneous Stiff Clay [75kPa].....	101
D6	Ultimate Geotechnical Capacities in Homogeneous Stiff Clay [100kPa].....	102
D7	Ultimate Geotechnical Capacities in Homogeneous Very Stiff Clay [150kPa] .....	103
D8	Ultimate Geotechnical Capacities in Homogeneous Very Stiff Clay [200 kPa] .....	104
D9	Ultimate Geotechnical Capacities in Homogeneous Hard Clay [225 kPa] .....	105
D10	Ultimate Geotechnical Capacities in Homogeneous Hard Clay [250 kPa] .....	106
D11	Ultimate Geotechnical Capacities in Homogeneous Medium Dense Sand.....	107
D12	Ultimate Geotechnical Capacities in Homogeneous Medium Dense to Dense Sand .....	108
D13	Ultimate Geotechnical Capacities in Homogeneous Dense Sand.....	109
D14	Ultimate Geotechnical Capacities in Homogeneous Stiff Clay [75kPa] - Ground Water .	110
D15	Ultimate Geotechnical Capacities in Homogeneous Stiff Clay [100kPa] - Ground Water .....	111
D16	Ultimate Geotechnical Capacities in Homogeneous Very Stiff Clay [150kPa]- Ground Water .....	112
D17	Ultimate Geotechnical Capacities in Homogeneous Very Stiff Clay [200kPa]- Ground Water .....	113
D18	Ultimate Geotechnical Capacities in Homogeneous Hard Clay [225kPa] - Ground Water ...	114
D19	Ultimate Geotechnical Capacities in Homogeneous Hard Clay [250kPa] - Ground Water ...	115
D20	Ultimate Geotechnical Capacities in Medium Dense Sand - Ground Water .....	116
D21	Ultimate Geotechnical Capacities in Medium to Dense Sand - Ground Water .....	117
D22	Ultimate Geotechnical Capacities in Dense Sand - Ground Water .....	118

D23	Blade Piles vs Bored Piers comparison charts .....	119
D24	Blade pile vs bored piers – Stiff Clay (75kPa) .....	120
D25	Blade pile vs bored piers – Stiff Clay (100kPa) .....	123
D26	Blade pile vs bored piers – Very Stiff Clay (150kPa) .....	126
D27	Blade pile vs bored piers – Very Stiff Clay (200kPa) .....	129
D28	Blade pile vs bored piers – Hard Clay (225kPa) .....	132
D29	Blade pile vs bored piers – Hard Clay (250kPa) .....	135
D30	Blade pile vs bored piers – Medium Dense Sand .....	138
D31	Blade pile vs bored piers – Medium Dense to Dense Sand .....	141
D32	Blade pile vs bored piers – Dense Sand .....	144
D33	Blade pile vs bored piers – Stiff Clay (75kPa) & in Water Table .....	147
D34	Blade pile vs bored piers – Stiff Clay (100kPa) & in Water Table .....	150
D35	Blade pile vs bored piers – Very Stiff Clay (150kPa) & in Water Table .....	153
D36	Blade pile vs bored piers – Very Stiff Clay (200kPa) & in Water Table .....	156
D37	Blade pile vs bored piers – Hard Clay (225kPa) & in Water Table .....	159
D38	Blade pile vs bored piers – Hard Clay (250kPa) & in Water Table .....	162
D39	Blade pile vs bored piers – Medium Dense Sand & in Water Table .....	165
D40	Blade pile vs bored piers – Medium Dense to Dense Sand & in Water Table .....	168
D41	Blade pile vs bored piers –Dense Sand & in Water Table .....	171
Appendix E. Engineering Certification .....		174
Appendix F. Blade Pile Cap Test Report .....		178
Appendix G. Blade Pile Testing & Results .....		190
G1	URS Testing .....	190
G2	Test Result – Recent Examples .....	196
G3	Testing Regime for the Geotechnical Strength of Blade Piles .....	200

**TABLE OF FIGURES**

Figure 1 – Large blades in soft plasticine clay .....6

Figure 2 - Dual Blade Pile ..... 8

Figure 3 - Piles caps installed on site ..... 9

Figure 4 – Examples of Customised Bracing Piles ..... 10

Figure 5 - Bearing Assembly ..... 12

Figure 6 - Corner Blade Plate ..... 14

Figure 7 – Preliminary Edge Beam Detail..... 14

Figure 8 - Air Pod ready for testing ..... 14

Figure 9 - Isometric views of the Air Pods to form the AirFormer Slab System ..... 15

Figure 10 - Assembly of Air Pods and Blade Plates to form the AirFormer Air Slab System ..... 15

Figure 11 - Design geotechnical capacity comparison of bored piers, screw piles and blade piles in clay ..... 17

Figure 12 - Design geotechnical capacity comparison of bored piers, screw piles and blade piles in sand ..... 17

Figure 13 - Design geotechnical capacity comparison of bored piers and blade piles in stiff clay .. 18

Figure 14 - Blade Piles Vs Screw Piles ..... 23

Figure 15 - Screw Helix Vs Twin Blades..... 23

Figure 16 - Effect of bedrock or water table on design suction change profiles (AS2870-2011)..... 27

Figure 17 - Bored Piers in Shrinking Clay Soil..... 30

Figure 18 - Bored Piers in Heaving Clay Soil ..... 31

Figure 19 - Weld capacity strong enough to withstand large forces to incur significant deflection.. 34

Figure 20 - Effective length factors for idealized conditions of end restraint (AS4100-1998) ..... 40

Figure 21 - Blade piles founded to very dense/stiff natural material with lower bearing material or with long term differential ..... 42

Figure 22 - Post Replacement Examples ..... 43

Figure 23 - Piling for Adjacent Services or trees ..... 43

Figure 24 - Example of piles for a retaining wall ..... 44

Figure 25 - Compression testing rig..... 48

Figure 26 – (Left) Incorrect method where reaction piles are less than the greater of 2.5m or 5 times the pile diameter (Right) Blade Pile uplift testing rig ..... 49

Figure 27 (a) Compression Loading Forces and (b) Tension Loading Forces Acting on a Multi-Helix Screw Pile (HPS 2010) ..... 74

Figure 28 - Bearing Capacity factor  $N_q$  for pile base capacity (Knappet & Craig 2012 after Berezantsev et al. 1961)..... 78

Figure 29 - Variation of Breakout Factor with Embedment Depth for Deep Anchor Conditions based on Mitsch and Clemence's Theory after Das, 1990 (Stephenson 1997) .....79

Figure 30 - Variation of Breakout Factor with Embedment Depth for Shallow Anchor Conditions based on Mitsch and Clemence's Theory after Das, 1990 (Stephenson 1997)..... 80

Figure 31 - Effect of the spacing between Inter-Helix (Narasimha et al 1991) .....83

Figure 32 - Methods to determine the ultimate geotechnical strength of a pile (Uno 2015) .....95

Figure 33 - Single & Multi-Blade Piles Embedment Depth for Blade Pile Capacity Tables .....96

## **TABLE OF TABLES**

Table 1 - Notations .....	4
Table 2 - Site Classification .....	25
Table 3 - P Class Classification Reasons .....	26
Table 4 - Relationship between $H_s$ values for climatic regions around Australia .....	27
Table 5 - Minimum testing requirement for each $H_s$ Value .....	28
Table 6 - Minimum depth of piles used in reactive clay for each $H_s$ value.....	28
Table 7 – Maximum Design Drying Depth - $H_t$ .....	32
Table 8 - Section capacity of the shaft according to AS4100 with no loss due to corrosion.....	33
Table 9 - Exposure Classification based on Soil Acidity/Alkalinity, Soil Chlorides, Resistivity (Standards Australia 2009) .....	35
Table 10 - Exposure Classification for steel piles in water (Standards Australia 1009).....	36
Table 11 - Exposure Classification and their related Corrosion.....	36
Table 12 - Minimum pile specification based on Exposure Class & the section capacities of the shaft according to AS4100 for the given design life & with a C350 Steel Grade. ....	38
Table 13 - Minimum pile specifications for a given effective length to AS4100 – Above Ground Applications .....	41
Table 14 - Critical Embedment Ratio, $(H/D)_{cr}$ for Circular Piles (Meyerhof & Adam 1968).....	78
Table 15 - Recommended average values of K (Das 2007).....	81
Table 16 - $K_u$ , coefficient of lateral earth pressure (after Mitsch & Clemence 1985 & HPS 2010)..	82
Table 17 - Sensitivity of Clays (A.B. Chance Company 2003) .....	84
Table 18 - End bearing reduction factors for multiple bearing plates in cohesionless soils (Lutenegger 2015) .....	84
Table 19 - Weighting Factors and Individual Risk Ratings for Risk Factors (AS2159-2009 Table 4.3.2 (A)).....	86
Table 20 - Individual Risk Rating (AS2159-2009 Table 4.3.2(B)).....	87
Table 21 - Basic Geotechnical Strength Reduction Factor for Average Risk Rating (AS2159-2009 Table 4.3.2(C)).....	87
Table 22 - Unit Weights of soil (Standards Australia 2002) .....	88
Table 23 - UCS & bearing capacity for clay (Standards Australia 1993) .....	89
Table 24 - Soil Friction Angle (Peck, Hanson & Thornburn 1974).....	89
Table 25 - Friction Angle used in Capacity Tables .....	89
Table 26 – Typical in-situ soil test relationship with different sand consistencies (Liddell n.d.).....	90
Table 27 - SPT for different types of sand (A.B. Chance Company, 2003) .....	90
Table 28 - Typical in-situ soil test relationships with different clay consistencies (Liddell n.d.) .....	90
Table 29 - Additional in-situ soil test relationships with different clay consistencies (Look 2007) ...	91

## **TABLE OF EQUATIONS**

Equation 1 - Geotechnical Design Strength.....	74
Equation 2 - Bearing capacity for shallow foundations .....	75
Equation 3 - Base resistance for compression in cohesive soil.....	75
Equation 4 - Base resistance for uplift in cohesive soils.....	75
Equation 5 - Shaft resistance in cohesive soils .....	76
Equation 6 - Base resistance for compression in cohesionless soils .....	77
Equation 7 - Base resistance for uplift in deep condition in cohesionless soil.....	78
Equation 8 - Base resistance for uplift in shallow conditions in cohesionless soil .....	78
Equation 9 - Shaft resistance for compression in cohesionless soils .....	80
Equation 10 – Effective Earth Pressure .....	81
Equation 11 - Shaft resistance for uplift in cohesionless soils .....	82
Equation 12 - Cylindrical Shear .....	83
